Hiring Manager

Cargill

Bengaluru, India

Subject: Application for Software Engineer Intern – January 2026 Intake

Dear Hiring Manager,

I am writing to apply for the Software Engineer Intern position at Cargill. I am currently pursuing a B.Tech in Computer Science and Engineering (CGPA: 8.31) at Vidya Academy of Science and Technology, graduating in 2026. My academic background and hands-on project experience have equipped me with strong skills in software development, AI/ML, and problem-solving.

Recently, I developed **AUTHENTIC EYE**, a full-stack web application to detect AI-generated images. I built REST APIs using FastAPI to serve a fine-tuned ConvNeXt-Tiny CNN model (PyTorch) and designed a responsive frontend with HTML, Tailwind CSS, and JavaScript. This project enhanced my expertise in deep learning, backend development, and full-stack implementation. Additionally, I completed a virtual internship in Emerging Technologies (AI) with Edunet Foundation in collaboration with AICTE & IBM, gaining practical exposure to AI-driven solutions.

I have also earned certifications in Google Cybersecurity, Infosys AI Primer, and Deloitte Data Analytics, reflecting my adaptability and interest in interdisciplinary technologies. With proficiency in C, Java, Python, SQL, and web development, I am eager to contribute effectively to Cargill's technology initiatives.

What excites me most about this role is the opportunity to apply my technical expertise in real-world projects while learning from Cargill's mentorship ecosystem and global collaborations. I admire Cargill's focus on innovation, professional growth, and teamwork, which align closely with my aspirations to become a versatile software engineer.

Thank you for considering my application. I look forward to the opportunity to discuss how my skills can add value to Cargill's Digital Technology team.

Sincerely,

Anusha Benny
