PROJECTS

CramX - AI Flashcard Generator (GitHub)

2025

- AI Flashcard Generator is an intelligent tool that automates the creation of study flashcards by extracting content directly from PDF learning materials. It operates through a Google Colab backend where PDFs are uploaded, processed using AI models (likely large language models like GPT), and important concepts are identified. These concepts are then converted into structured question-and-answer pairs, which are output in a clean JSON format. This JSON can be used for personalized review sessions and is compatible with flashcard platforms. The tool is designed with a user-friendly interface, allowing even non-technical users to generate customized flashcards effortlessly, making revision and memorization more efficient and engaging
